Introduction:

● The agriculture in India employs more than 50 percent of the population of the country and accounts for about 25 percent of the national income.

● Agriculture in India is determined by a set of factors. Some of the important factors:

1. Physical factors: relief, climate and soil.
2. Institutional factors: Size of farm holdings, land tenure, and land reforms.
3. Infrastructural factors: Irrigation, power, transport, credit, market, insurance and storage facilities.
4. Technological factors: High yielding varieties of seeds, chemical fertilisers, insecticides and machinery.

Types of Farming

Subsistence Farming	•Preference is given to food crops. In addition to the food crops, sugarcane, oilseeds, cotton, jute and tobacco are also cultivated. Traditional farming method results in low productivity
Shifting Agriculture	•Once the land is cleared, crops are grown for two to three years. •It is also called as "Slash and burn" cultivation
Intensive Farming	•Aims to Maximise yields from available land, through various means such as heavy use of pesticides and chemical fertilizers
Dry Farming	•Most of the areas under dry cultivation entertain only one crop per year
Mixed Farming Agriculture	•Mixed farming is defined as a system of farm which includes crop production, raising livestock, poultry, fisheries, bee keeping etc. .

Different names of shifting agriculture in different regions in India

Name	Place
Jhum	Assam
Poonam	Kerala
Podu	Andhra Pradesh, Odisha
Beewar, Mashan, Penda, Beera	Various Parts of Madhya Pradesh

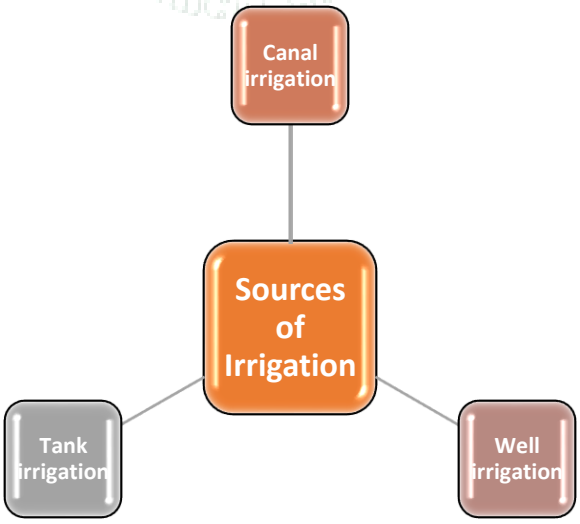

Cropping Seasons in India

Cropping Seasons	Northern States- Major crops cultivated	Southern States- Major crops cultivated

Kharif Season June–September	Rice, Cotton, Bajra, Maize, Jowar, Tur	Rice, Ragi, Maize, Jowar, Groundnut
Rabi Season October–March	Wheat, Gram, Rapeseeds, Mustard, Barley	Rice, Maize, Ragi, Groundnut, Jowar
Zaid Season April–June	Vegetables, Fruits, Fodder	Rice, Vegetables, Fodder

Irrigation

- Watering of agricultural plants through artificial means is called irrigation.
- Being a hot country with seasonal and irregular rainfall, it always needs irrigation to carry out agricultural activities during dry period.

Canal Irrigation

- It is the second most important source of irrigation in our country.
- Percentage of area under canal irrigation in our country is 24%.
- The canals are of two types:
  - **Inundation Canals**: In this, water is taken out directly from the rivers without making any kind of barrage or dam
  - **Perennial Canals:** These are developed from perennial rivers by constructing barrage to regulate the flow of water.
- About 60 percent of the canal irrigated area falls in the northern plains of India.

Well Irrigation

- A well is a hole or trough, usually vertical, excavated in the earth for bringing Ground water to the surface.
- Wells are of two types:
  - **Open wells:** This type of irrigation is widely practiced in the areas where groundwater is sufficiently available.
  - **Tube Wells**: Tube wells are developed in the areas of low water table, sufficient power supply and soft subsurface geological units.
- Well irrigation is the most important source of irrigation as it contributes about 62 percent of net irrigated area in India.
- The top of percentage of areas under well irrigation -Uttar

Tank Irrigation:

- Irrigation by tanks is a very old system in India.
- The tank irrigation is popular in the peninsular India due to the following reasons:
  - The undulating relief and hard rocks make difficult to dig canals and wells.
  - Natural depressions serve as reservoirs.

Top state of tank Irrigation-Tamil Nadu

Modern irrigation methods:

- **Drip System**: This is introduced by Israel country.70% of water can be saved by this irrigation system
- **Rain Gun**: used to serve for crops which used to grow up to 4 feet or high also typical usage of Rain guns are in sugarcane, maize crop.
- **Central-pivot irrigation**: It is also called waterwheel and circle irrigation. It is a method of crop irrigation in which equipment rotates around a pivot and crops are watered with sprinklers
- 2015-Prime Minister Krishi Sinchayee Yojana: Improve On-farm water use efficiency to reduce wastage of water.

Major Crops Cultivated in India

Food Crops

Rice

- Rice is an indigenous crop.
- India is the second largest producer of rice in the world after China.
- It is mainly a tropical crop, growing mainly with mean temperatures of 24°C and annual rainfall of 150 cm.
- Deep fertile clayey or loamy soils are suited well for rice cultivation.

Wheat

- Wheat is the second most important food crop of the country, after rice.
- It accounts for 22 percent of the total area and 34 percent of the total production of food grains in the country.
- It requires 10-15°C at the time of sowing and 20-25°C at the time of ripening of grains.

Jowar

- Jowar is the third important food crop of our country.
- It is an indigenous plant of Africa.
- The plant has a tendency to grow in adverse climatic conditions.

Bajra

- Bajra is an indigenous plant of Africa.
- This forms the staple food for poor people.
- Its stalks are used as fodder for cattle and for thatching roofs.

Barley

- Barley is one of the important cereals of our country. Besides, being poor man's diet, it is used for making barley water, beer and whiskey.

Pulses

- Pulses include a large number of crops which are mostly leguminous and rich in vegetable protein.
- India is the largest producer of pulses.

Cash Crops

Sugarcane

- India is the second largest producer in the world.
- India is ranked third in sugar production in the world after Cuba and Brazil.
- At the state level, Uttar Pradesh is the leading producer of sugarcane

Cotton

- It provides raw material to the largest industry of India.
- India ranks second next to China in the production of cotton.

Jute

- It is a tropical fibre crops, grows well in the alluvial soil
- West Bengal is the leading state both in cultivation and production of jute.

Oil Seeds

- Oil seeds, the premier source of fat in the Indian diet .
- Gujarat is India's largest oilseeds producing state.
- In groundnut production, India is the second largest producer in the world after China.

Plantation Crops

Tea

- Tea is an evergreen plant that mainly grows in tropical and subtropical climates.
- Two major varieties of tea are cultivated in India.
- They are i) Bohea originated from China and ii) Assamica from India.

Coffee

- Coffee is grown in shade.
- India is the 7th largest producer of coffee globally.
- Karnataka is the leading producer of coffee in India.

Rubber

- Rubber plantations were first established in Kerala in 1902.
- It needs hot and wet climatic conditions (temperature above 20°C and rainfall above 300cm).

Spices

Kerala is the leading producer of spices in India.

Horticulture Crops

- It refers to the cultivation of fruits, flowers and vegetables.
- India is in the second position in the production of fruits and vegetables

Livestock

- **Livestock is an integral component of the farming system in India.**
- **Livestock sector contributes approximately 4 percent of national GDP and 25.6 percent to agriculture GDP.**
- **First Livestock Census in India was conducted with the title of Dairy Cattle Census in 1919.**
- **Following this, the 19th Livestock census was conducted in October 2012 and it takes place at every five years**

Cattle

Cattle constitute 37.3 percent of livestock population in India.
India has second largest cattle population after Brazil at World level.

Goats

- The goat is the poor man's cow providing milk, meat, skin and hair.
- It is the main source of meat for the country.
- Rajasthan records first with 16 percent followed by Uttar Pradesh and Bihar

Buffaloes

Uttar Pradesh Uttar Pradesh has the highest number of buffaloes (28.2%) followed by Rajasthan (9.6%) and Andhra Pradesh (7.9%).

Dairy, Meat and Wool Production

- The total production of milk in our nation is 163.7 million tonnes.
- The leading producer was Uttar Pradesh followed by Rajasthan and Madhya Pradesh in total milk production.
- Uttar Pradesh is the leading producer in meat production.
- The leading state in the wool production is Rajasthan

TNPSC - UNIT II: GEOGRAPHY MINDMAP

Fisheries

Inland or Fresh Water Fisheries

About 50 percent of the country's total fish production comes from the inland fisheries and Andhra Pradesh is the leading producer in India.

Marine or Sea Fisheries:

Kerala leads in the marine fish production in India.

List of important Agricultural Revolutions in India

Revolution	Related Product
Yellow Revolution	Oil seed Production (Especially Mustard and Sunflower)
Blue Revolution	Fish Production
Brown Revolution	Leather / Cocoa / Non-Conventional Products
Golden Fibre Revolution	Jute Production
Golden Revolution	Fruits / Honey Production / Horticulture Development
Grey Revolution	Fertilizers
Pink Revolution	Onion Production / Pharmaceuticals / Prawn Production
Evergreen Revolution	Overall Production of Agriculture
Silver Revolution	Egg Production / Poultry Production
Silver Fibre Revolution	Cotton
Red Revolution	Meat Production / Tomato Production

Round Revolution	Potato
Green Revolution	Food Grains
White Revolution	Milk Production
